ABOUT ANDRÉA NORDMARK

Andréa joined Zacco as a Patent Attorney Trainee in 2025, after graduating with a Master of Science in Engineering Physics from Uppsala University.

Her academic specialisation is in Applied Physics and during her studies she gained practical experience, supporting multiple stakeholders across research-based university positions and internships. These included contributing to joint projects involving the construction and analysis of perovskite solar cells and the manufacture and evaluation of various thin film fabrication techniques, all providing a detailed technical background for her work in patent consulting.

Andréa is keen to work with clients in the sensor technology, synthetic materials and renewable energy space, particularly with reference to solar technology and optical measurement. She uses her strong technical background to assist clients with the identification and development of own ideas, while building her patent expertise through both client interaction and colleague collaboration.
